

Xanax Moche Latte (Two Servings)

Ingredients:

1	ea	Alprazolam (Xanax) Scored Tablet	(2 mg)
44	ml	Ethanol (Clear Spring Grain Alcohol, 198 proof)	(1 shot)
250	ml	Brewed Coffee	(1 cup)
250	ml	Whole Milk	(1 cup)
45	g	Hot Chocolate Mix	(3 tbsp)
15	g	Sucrose (Table Sugar)	(1 tbsp)
125	ml	Whipped Topping (Optional)	(½ cup)

Procedure:

1. Using a mortar and pestle, grind the Alprazolam tablet into a fine powder. Although the bulk of the tablet is mostly corn starch and binding agents, Alprazolam itself is relatively insoluble in water so it is essential to grind the tablet as thoroughly as possible.
2. Dissolve the ground Alprazolam tablet in the ethanol. It may be difficult to completely dissolve the corn starch comprising the bulk of the tablet, but this isn't really necessary. Once thoroughly mixed, the ethanol will dissolve the Alprazolam and the corn starch and binding agents can be removed either through vacuum filtration or using a centrifuge to settle the suspended particles and a pipette to remove the supernatant liquid.
3. Heat the milk to approximately 40 deg C. Froth using an aerator or live steam. If neither is available, give a four-year old child a straw and tell him to blow bubbles in the milk.
4. Brew coffee to taste. Although the author prefers full-strength Kona coffee with fresh dark-roast and home-ground beans, wimps may choose to substitute decaf. Do not use instant coffee or "Folger's Crystals" because the formaldehyde found in instant coffee will bond with the Alprazolam, rendering it inert.
5. Dissolve the Hot Chocolate Mix in the coffee. Cheaper brands of hot chocolate are more difficult to dissolve and will require more vigorous agitation.
6. Add frothed milk to the coffee. Stir if desired. Note that normal convection will quickly disperse the warm milk throughout the coffee and produce a pleasant suspension or emulsion.
7. Add the solution of ethanol and Alprazolam to the coffee. Take a moment to quickly inhale the ethanol fumes liberated by the rapid heating of the solution. This may help prevent later nausea and vomiting.
8. If desired, one can top this delightful beverage with whipped cream and perhaps dust the whipped cream with left-over powder from the hot-chocolate mix.
9. Please note that Alprazolam is a benzodiazepine and may have a synergistic effect when taken with alcohol. Using Alprazolam together with ethanol can increase nervous system side effects such as dizziness, drowsiness, and difficulty concentrating. Some people may also experience impairment in thinking and judgment. You should avoid or limit the use of alcohol while being treated with Alprazolam. Do not use more than the recommended dose of Alprazolam, and avoid activities requiring mental alertness such as driving or operating hazardous machinery until you know how the medication affects you.
